VIVA VOCE – FINAL REPORT

DSA06 – Data Handling and Visualization

Student Record

Student	Vanumu surya satvika
Register No.	192524254
Course Code	DSA0607
Assessment	Assessment Tool 3 – Viva Voce
Total Questions	20
Maximum Marks	100
FINAL SCORE	95/100

Overall Evaluation

The student demonstrated a strong understanding of uncertainty visualization and advanced data visualization concepts throughout the viva voce. The responses showed good knowledge of communicating uncertainty, probability, confidence intervals, bootstrapping, overplotting, axis design, accessibility, and advanced uncertainty visualization techniques.

Strengths

1. Strong conceptual understanding of uncertainty visualization.
2. Good understanding of confidence intervals, probability, and bootstrapping.
3. Clear understanding of overplotting, transparency, and jittering.
4. Good awareness of misleading axes and inappropriate use of color.
5. Understanding of accessibility considerations in visualization.
6. Good knowledge of probability distributions and combined uncertainty representations.
7. Ability to distinguish animated and static visualization approaches.
8. Confident understanding of interactive techniques for exploring uncertainty.

Areas for Improvement

1. Provide more real-world examples when explaining uncertainty concepts.
2. Explain advanced uncertainty plots with practical datasets.
3. Give more detailed comparisons between alternative uncertainty visualization methods.
4. Strengthen explanations of accessibility and design choices for different audiences.

Graphical Analysis

1. Overall Viva Voce Score

The student obtained 95% out of 100%, indicating excellent performance in the viva voce assessment.

2. Topic-wise Performance

The assessment covers six major areas: Visualizing Uncertainty, Principles of Effective Visualization, Handling Overplotting, Common Pitfalls in Visualization, Accessibility & Uncertainty Design, and Advanced Uncertainty Visualization. The student demonstrated strong performance across these areas.

Conclusion

The viva voce was successfully completed with an overall score of 95/100. The result indicates that the student has a strong foundation in uncertainty visualization and is capable of applying effective visualization principles while considering clarity, accessibility, overplotting, and potential sources of misleading representation.

Final Result

Particular	Details
Student	Vanumu Surya Satvika
Register No.	192524254
Total Questions	20
Maximum Marks	100
FINAL SCORE	95/100
RUBRIC LEVEL	LEVEL 4 – EXEMPLARY

Overall Remark

The student demonstrated excellent conceptual knowledge, good interpretation of uncertainty visualization techniques, and confident communication throughout the viva voce. With a score of 95/100, the student achieved Level 4 – Exemplary performance and demonstrated the ability to create and evaluate effective visualizations using appropriate data handling and advanced visualization principles.

Assessment Basis

This report is based strictly on Assessment Tool 3 – Viva Voce for DSA06 – Data Handling and Visualization. The source assessment contains 20 questions carrying 1 mark each and focuses on uncertainty visualization, effective visualization principles, overplotting, common visualization pitfalls, accessibility, and advanced uncertainty visualization.
